Summary

Full-Stack Developer with 4+ years of experience building enterprise-scale web and mobile applications using Angular, React, NestJS, and Spring Boot. Proven track record in microservices architecture, production system reliability, and payment/webhook integrations at scale (8,000-10,000+ daily transactions). Expanding into real-time data engineering with Kafka, Debezium, and Medallion Architecture. Strong record of cross-functional collaboration, mentoring, and production incident diagnosis.

Skills

- Languages: JavaScript, TypeScript, HTML5, CSS3, SQL
- Frontend: React, Angular, React Native, Vue.js, Ionic
- Backend: Node.js, NestJS, Express.js, Spring Boot, REST APIs, Swagger/OpenAPI, JWT, RBAC, Webhooks, Microservices
- Databases: MySQL, PostgreSQL, Ingres DB, Redis
- Cloud & DevOps: AWS, Docker, Terraform, Jenkins, GitHub Actions, PM2, Nginx, Linux
- Data Engineering: Apache Kafka, Kafka Connect, Debezium, Dagster, Medallion Architecture, Prometheus, Loki
- Mobile Deployment: Google Play Store, Apple App Store, TestFlight
- AI-Assisted Development: Claude Code, Cursor, GitHub Copilot, ChatGPT
- Tools: Git, GitHub, Postman, Jira, DBeaver, VS Code

Work Experience

Finstein *Hyderabad, India (Client Location) / Chennai HQ*

Full Stack Developer

Dec 2021 - Present

- Architected and shipped enterprise web and mobile applications using Angular, React, NestJS, and Spring Boot, taking features from design through production deployment.
- Designed modular REST APIs documented with Swagger/OpenAPI following microservices principles, streamlining integration for downstream teams.
- Migrated 180,000+ production records into Ingres with zero data loss and minimal downtime.
- Automated deployment pipelines with Terraform, GitHub Actions, Docker, PM2, and Nginx, cutting manual release effort.
- Integrated Razorpay and Jio payment gateways with secure HMAC-signature webhook verification, handling 8,000-10,000 transactions per day.
- Built Redis-backed asynchronous notification services, improving SMS and notification throughput.
- Optimized complex SQL queries across MySQL, PostgreSQL, and Ingres, cutting average query/API response time from ~800ms to ~300ms.
- Implemented JWT authentication and Role-Based Access Control (RBAC) across production systems.
- Applied AI-assisted development tools (Claude Code, Cursor, GitHub Copilot, ChatGPT) to accelerate feature development, refactoring, debugging, and code review while maintaining production quality.
- Contributing to a Debezium -> Kafka -> MariaDB CDC pipeline replicating 29 production tables into a Bronze analytics layer, building hands-on expertise with Kafka Connect and Medallion Architecture.
- Detected a 19-hour CDC sync outage via monitoring dashboard alerts (stale analytics table timestamps despite continuous transaction activity); diagnosed the root cause as a concurrent legacy data migration blocking the Debezium/Kafka pipeline due to data type mismatches, and coordinated with the migration team to resolve it - sync resumed with zero data loss once fixed.
- Published and maintained mobile applications on Google Play Store and Apple App Store, including beta distribution via TestFlight.
- Contributed to architecture discussions, code reviews, production support, and mentoring of junior developers.

Projects

Chit Fund Management Suite & Live Bidding Portal

Technologies: React, Angular, Spring Boot, Ingres DB, Redis

- Built enterprise web and mobile applications for chit fund management.
- Implemented secure live auction bidding with Role-Based Access Control.
- Used Redis caching to improve responsiveness during real-time bidding sessions.

Online Assessment & Learning Management System

Technologies: React, React Native, NestJS, MySQL

- Built scalable online assessment and learning management platforms.
- Developed reusable APIs and responsive UI components for web and mobile applications.

Cloud-Native Expense Approval Workflow (AI-assisted build using Claude Code)

Technologies: React, Node.js, MySQL, Docker, Terraform

- Designed and implemented a multi-level expense approval workflow with JWT authentication.
- Containerized and deployed via Docker with Terraform-managed infrastructure and CI/CD pipelines.

Education

B.Sc. Computer Science 2018 - 2021

Bharathidasan University
